Widespread touchy conditions at Bridger

Date Mon, 12/30/2024 - 07:05

I recieved a call from BBSP patrol director at 9:50.

They had widespread, hair-trigger results during avalanche mitigation work.

A lot of slopes avalanched naturally before patrol made it up the mountain.

At 0900 they measured 1.8" of snow water equivalent (SWE) from the last 24 hours at the Alpine gun mount.

Region Bridger Range Location (from list) Bridger Bowl Observer Name Alex Marienthal
